

Safe, Reliable...Quality Oriented!

COVID-19 Update

At W.T. Byler, it is our priority to keep our employees and their families healthy. As the coronavirus disease 2019 (COVID-19) continues to spread globally, we are taking appropriate precautions to address the outbreak by following guidelines from the Centers for Disease Control and Prevention (CDC). Our current approach and response to COVID-19 are outlined below. Please read this information carefully and direct any follow-up questions to your manager or HR.

What is COVID-19?

COVID-19 is caused by a member of the coronavirus family, and it first appeared in late 2019 in Wuhan, China. Symptoms of COVID-19 can include fever, runny nose, cough and breathing trouble. While most people experience mild symptoms, some may develop more severe symptoms, which can be fatal.

COVID-19 is believed to be spread person to person, which means that infection can occur through close contact with infected individuals. Although it is believed that COVID-19 is most contagious when an infected individual is most symptomatic, an individual may still be contagious without exhibiting any symptoms.

Prevention Tips

According to the CDC, the best way to prevent the spread of COVID-19 is to avoid it. Do your part by practicing good hygiene at work and at home:

- Regularly wash your hands for at least 20 seconds throughout the day with warm water and soap, specifically before eating.
- Cover coughs and sneezes.
- Avoid making close contact with others, such as shaking hands.
- Avoid touching your eyes, nose and mouth.
- Frequently clean and disinfect commonly used surfaces with household cleaning spray or wipes.

Your Personal Health

If you have symptoms of acute respiratory illness, you should immediately seek medical attention and follow the guidance of your health care provider. If you are exhibiting symptoms or if you are diagnosed with or aware you've been directly exposed to COVID-19, please notify your immediate supervisor.

Congratulations Hugo Reyes (BLADE project) for being recognized as a Safety Champion!

Housekeeping:

A Clean Workspace is a Safe Workspace!

Keeping our projects and our equipment clean during construction is one of the most important ways that we can mitigate hazards and increase safety in the workplace. When good housekeeping is implemented on the jobsite, the jobsite is more organized, uncluttered and consequently hazards are reduced. Not only is the worker's safety increased with good housekeeping, but productivity and employee health also experiences a boost. Some other benefits of good housekeeping include:

- Fewer trips and slips when walkways are free of clutter
- Decreased fire hazards by eliminating loose waste, dust, debris and other flammable materials
- Reduced struck-by accidents when materials, tools and equipment are properly stored
- Reduced worker exposure to hazardous substances when a regular cleaning schedule is used
- Safe working environments lead to higher employee morale and increased productivity
- Improved preventative maintenance reduces property damage

Small changes to the way we do our daily activities are easy to adapt and implement but they can make a big difference!

- Never put trash or debris on the ground. Always dispose of properly.
- Make sure that the cab of operated equipment is free from trash and debris
- If you see something...do something! Passing by housekeeping issues without responding can actually create a hazard for those we work with every day. If the hazard requires addition people to help, report it to your supervisor immediately and stay in the area until help arrives to prevent injuries.
- Use drip pans and guards
- Set several times a day that you will commit to inspect your work space and address any housekeeping issues. Don't wait until the end of the day to organize your work space.
